

Simple Stylized Fire – TV Graffiti (URP)

Procedural stylized fire subgraph for **Universal Render Pipeline (URP)** with a demo decal shader example.

This package provides reusable Shader Graph SubGraphs for creating stylized procedural fire effects.

A demo decal shader is included to demonstrate practical usage inside a scene.

Requirements

- Unity **2021.3 LTS** or newer (recommended 2022.3 LTS)
- **Universal Render Pipeline (URP)**
- Shader Graph

This package is built specifically for **URP**.

Core SubGraphs

Located in:

```
Fire_TV_Graffiti/Shaders/SubGraphs
```

StylizedFire.shadersubgraph

Main procedural fire logic.

Generates animated stylized flame pattern using procedural techniques.

SmoothEllipse.shadersubgraph

Utility subgraph for creating soft elliptical masks.

TilingOffsetPanning.shadersubgraph

Utility subgraph for UV manipulation (tiling, offset and panning animation).

These subgraphs are modular and can be reused in other Shader Graphs.

Demo Shader

Located in:

```
Fire_TV_Graffiti/Shaders/Fire_Decal_ShaderGraph.shadergraph
```

This Shader Graph:

- Uses the **StylizedFire** subgraph as the main fire generator
- Combines it with additional textures:
 - TV_Background.png
 - TV_Foreground.png
- Designed as a decal-style graffiti effect inside a stylized TV frame

It demonstrates how to integrate the procedural fire into a production-ready shader.

► Demo Scene

Open:

```
Fire_TV_Graffiti/Demo/Demo.unity
```

The demo scene includes:

- Ready-to-use material
- Volume setup
- Example environment
- Camera motion script for preview presentation

No additional setup required (URP project assumed).

✂ How to Use the Fire SubGraph

1. Create a new **Shader Graph** (URP compatible).
2. Add a **SubGraph node**.
3. Select `StylizedFire.shadersubgraph`.

4. Connect its output to:

- Emission
- Base Color
- Alpha (if needed)

You can combine it with:

- Custom masks
- Decals
- Distortion
- Additional noise layers

The system is designed to be modular and production-friendly.

Customization Ideas

- Change color ramp for different fire styles
 - Add distortion via UV offset
 - Use vertex color as mask
 - Use depth fade for blending
 - Combine with decals for graffiti-style effects
-

Notes

- Built and tested in URP.
 - Not compatible with Built-in Render Pipeline.
 - HDRP not officially supported.
